DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Knappe et al. (USPN 6,537,496).

Knappe discloses a flat-shaped functional overlay for use with a test strip. This overlay provides the test strip to bend (creating multiple planes, fig. 5) and adjust to the surface for assaying in order to give a flush contact (pressure points, entire surface) with the surface (col. 7, lines 29-37; fig. 2-7).

Claims 4 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Roberts, Jr. (USPN 4,326,000)

Roberts, Jr discloses a unitary or integral laminate-like fibrous web having a first and second surface region and a central core region, which has less fiber concentration than the first. Roberts discloses elongation of the web (pores) in both the directions increases the capillary action of moisture drawn into the web (col. 16, lines 7-36) which

can be used in a test strip for improving capillary action and sample uptake (col. 17, line 50- col. 18, line 2).

Claim 6 is rejected under 35 U.S.C. 102(b) as being anticipated by Porter et al. (USPN 5,709,838).

Porter discloses a single use sampling and sample delivery method that comprise a tapering the end of a test strip in order to provide simple sample uptake (fig. 1).
